

Curtain e-locker in workstation

Do you:

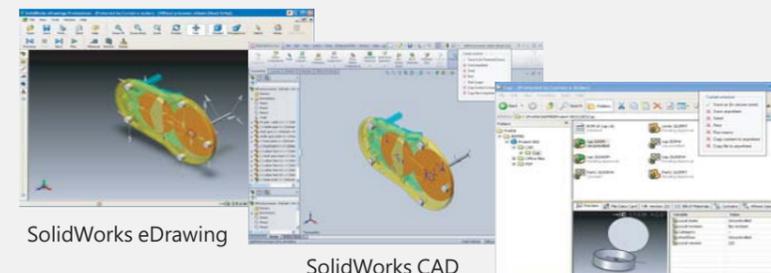

- have problems in protecting your intellectual properties?
- want to prevent sensitive files from being copied to external sources?
- want to stop sensitive files from leaking to your competitors?
- want to increase your investment in R&D to differentiate your products?
- want to protect your ideas?

Then **CURTAIN** is the unique solution!

Curtain e-locker is an Information Rights Management system that prevents sensitive files from leaking out of the company by any exit channels (e.g. USB hard-disk, CDR, and web mail). By using Curtain e-locker, a company can allow users to access sensitive files. At the same time, the company can control NOT to allow the users to print, save as, or send files to external sources during normal course of daily operations.

Curtain e-locker has a unique design called Protected Zone. Administrators can define which share folders in Windows File Server are protected by the system. In order to access the Protected share folders, Curtain Client must be installed on users' workstations. During installation of Curtain Client, an encrypted folder (called Local Protected Directory) will be created automatically. Users can work with the sensitive files within Protected Zone as usual (e.g. New Copy, Rename, Delete, and Edit). However, they cannot take the files out of the company if they are not authorized to do so.

Curtain e-locker works seamlessly with SolidWorks products (e.g. eDrawing, EPDM, and Simulation). It greatly enhances the file security of SolidWorks.

SolidWorks eDrawing

SolidWorks CAD

SolidWorks PDM

Features of Curtain e-locker:

Online / Offline protection

- Files can be downloaded to local Protected Directory for reading or editing.
- Administrators can define different control policies, to make sure sensitive files are secure even workstations are offline.

☞ Make sure sensitive files are secure when users are working out of office

Protect first draft

- File creators must save new files to Protected Zone.
- This control can be applied per application. It is suitable for R&D dept.

☞ Prevent creators to save new design files to other locations

Smart copy & paste control

- Copy & paste in-between files in Protected Zone is allowed
- Copy data to Protected Zone is allowed
- However, copy data from Protected Zone to other locations is prohibited

☞ Make a good balance between convenience and security

Personal local protected directory

- Local Protected Directory is personal according to login user
- It is suitable for shared workstations and notebooks

☞ Prevent other users to access your local Protected Directory

Screen capture protection

- Window of showing sensitive data is dimmed when doing screen-capture
- Users can still enjoy the convenience of screen-capture for non-sensitive data
- Screen-dump software is also blocked

☞ Make sure sensitive information is secure

Secured internal file sharing

- Users can pass encrypted files to colleagues by email or USB hard-disk
- The files can be only decrypted within the company

☞ Sensitive files are still secure even when the USB hard-disk is lost

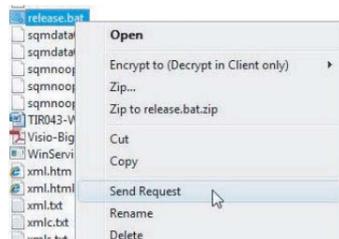

Central audit log

- File activities in Protected Zone are logged
- Self-defined watermark and taking snapshot for printouts

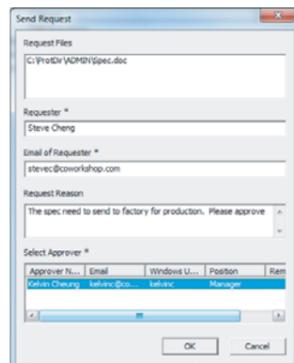

☞ Allow management to review the usage of sensitive files

New Feature - Send Request

1. Select protected file(s) and right-click to select "Send Request"

2. Fill up the form (e.g. Request reason) and click OK. The request will be sent to the approver by email

3. Approver can approve or reject the request

4. The whole approval process will be logged in Audit Trail
